Electrical Power & Energy Systems

Index to Volume 15 1993

Number 1 pp 1–56
Number 2 pp 57–128
Number 3 pp 129–200
Number 4 pp 201–256
Number 5 pp 257–336
Number 6 pp 337–408

Article Index

Number 1

Editorial 3
Dominant mode filter for enhancing power system stability
H Saitoh, J Toyoda and Y Kobayashi 5
Decision tree approach to power systems security assessment
L Wehenkel and M Pavella 13
Introduction of natural gas in a hydro-thermal system, a multi-objective approach
G Skugge and J Bubenko Sr 37
Study of voltage collapse at converter bus in asynchronous MTDC-AC systems
K R Padiyar and V Kalyana Raman 45

Number 2

Reliability of digital relays with self-checking methods
A F Brandão Jr and E C Senger 59
Application of hierarchical neural networks to fault diagnosis of power systems
K-H Kim and J-K Park 65
A complete strategy for optimal reactive load flow
A A A El-Ela 71
Maximum efficiency of series and shunt compensated AC transmission systems
M H Haque 79
Enhancement of dynamic stability by coordinated control of static VAR compensators
A Román-Messina and B J Cory 85
Assessment of electric service reliability worth
R Billinton, G Tollefson and G Wacker 95
Model-based control of power plant diagnostics
O Saarela 101
Medium range forecasting of power system load using modified Kalman filter and Walsh transform
T K Bhattacharya and T K Basu 109
Application of a modal-based transient energy function to a large-scale stressed power system: assessment of transient stability and transient voltage dip
R Treinen, V Vittal and A A Fouad 117

Number 3

Sensitivity based expert system for voltage control in power system
S P Singh, G S Raju and A K Gupta 131
An efficient approach to the evaluation of mid-term dynamic processes in power systems
R M Živanović, and D P Popović 137
Maximum loadability and voltage stability in power systems
P W Sauer, B C Lesieutre and M A Pai 145
Optimal capacitor placement in distribution systems by genetic algorithm
G Boone and H-D Chiang 155
New modelling, analysis and computation techniques needed for power system control centres
A Bose and T A Green 163
An adaptive optimal controller and its application to an electric generating unit
O P Malik and C Mao 169
A rational approach for incorporating capital costs in the real-time pricing of electricity
A K David and Y Z Li 179
Verification of a knowledge-based restoration guidance system in a local dispatching centre
K Kuroda, Y Takegoshi, K Yamashita, M Ito and S Fukui 185
Simultaneous solution of unit commitment and dispatch problems using artificial neural networks
M H Sendaula, S K Biswas, A Eltom, C Parten and W Kazibwe 193

Number 4

Editorial 203
Practical considerations in voltage stability assessment
P Kundur, K Morison and B Gao 205
Survey of effective and practical solutions for longer-term voltage stability
C W Taylor 217
Planning methodologies for voltage stability limited power systems
W Xu, Y Mansour and P G Harrington 221
On the analysis of long-term voltage stability
P-A Löf, D J Hill, S Arnborg and G Andersson 229
Simulation of voltage collapse
M Stubbe, A Bihain and J Deuse 239
Planning and operations benefits of high fidelity voltage collapse simulations
N W Miller and W W Price 245
Voltage collapse at the load end of a series compensated EHV transmission line
S C Tripathy, C S Indulkar and B Viswanatha 251

Number 5

A Benders' decomposition approach to the multi-objective distribution planning problem
N Kagan and R N Adams 259
A new decomposition method for optimal operation of transmission/generation and subtransmission/distribution systems
M Brucoli, M La Scala, F Torelli and M Trovato 273
A closed loop controller for voltage stability
V V Raju and A Kuppurajulu 283
Variable structure load frequency controllers for multiarea power systems
Z M Al-Hamouz and Y L Abdel-Magid 293
An improved linearized method for evaluation of bus voltage for line outage contingency
A K Jana, P B Duttagupta and G Durga Prasad 301
A real-time closed loop controller for security dispatch
D Vinod Kumar, V Veera Raju and A Kuppurajulu 307
Transient algebraic circuits for power system dynamic modelling
P W Sauer, B C Lesieutre and M A Pai 315
Modular graphic representation of complex electrical networks
N M Avouris, R N Allen and M Lagoudakos 323

Number 6

Probabilistic determination of the margin of transient stability
C S Indulkar 339
Operational and economic benefits of battery energy storage plants
D Kottick and M Blau 345
Stabilization of power systems by governor–turbine control
H F Wang, Y S Hao, B W Hogg and Y H Yang 351
Integration of automatic mapping/facility management in distribution system analysis
M T Tsay, W M Lin, C N Lu and C S Chen 363
Determination of minimum break point set for protection co-ordination using a functional dependency concept
H B Elrefaie and M R Irving 371
Classification of voltage problems in electric power systems
F K Mak and M D Ilić 377
Enhancement of interconnected power system stability using a control strategy involving static phase shifters
M La Scala, R Sbrizzai, F Torelli and M Trovato 387
Expert system for energization of lightly loaded transmission lines
D K Ranaweera and G G Karady 397

Keyword Index

Adaptive control
Synchronous generator, System stabilizer 169
Automatic mapping/facility management
Database, Graphic user interface 363

Battery
Storage, Spinning-reserve 345

Capacitor placement
Genetic algorithm, Power distribution 155
Computer applications
Power system protection 371
Control centre design
Online control strategies, Security assessment 163

Database
Automatic mapping/facility management, Graphic user interface 363
Decentralized control
FACTS, Static phase shifters 387
Decision trees
Power system security assessment, Real time control 13
Diagnostic checks
Walsh transform, Forecasting 109
Diagnostics
Signal analysis, Model-based reasoning 101
Digital simulation
Long-term system dynamics, Transmission expansion 245
On-line control strategies, Eigenvalue analysis 293
Distribution system design
Mathematical optimization 259
Distribution systems
Emergency control, Security assessment 301
Dynamic load models
Long-term system dynamics, Voltage stability 221
Dynamic stability
Long-term system dynamics, Eigenvalue analysis 85
On-line control strategies, Transient stability 351

Economic dispatch
Unit commitment, Optimal solution 193
Eigenvalue analysis
Long-term system dynamics, Dynamic stability 85
Voltage stability, Long-term system dynamics 205
On-line control strategies, Digital simulation 293
Electric power systems
Voltage stability, Load modelling 145
Emergency control
On-line control strategies, Software design 283
Distribution systems, Security assessment 301
On-line control strategies, Software design 307
Energization
Expert systems, Load flow 397
Expert system
Real-time, Restoration guide 185
Expert systems
Energization, Load flow 397

FACTS
Decentralized control, Static phase shifters 387
Fault diagnosis
Hierarchical neural network, Modular neural network 65
Forecasting
Walsh transform, Diagnostic checks 109

Genetic algorithm
Power distribution, Capacitor placement 155
Graphic user interface
Database, Automatic mapping/facility management 363

HVDC
Voltage stability, Security assessment 45
Hierarchical neural network
Fault diagnosis, Modular neural network 65

Insecure voltage operating conditions
Mid-term voltage dynamics 377

Line efficiency
Transmission efficiency, Maximum efficiency 79
Load flow
Scheduling, Optimal power flow 131
Network analysis, Long-term system dynamics 229
Energization, Expert systems 397
Load modelling
Electric power systems, Voltage stability 145
Long-term system dynamics
Dynamic stability, Eigenvalue analysis 85
Voltage stability, Eigenvalue analysis 205
Voltage stability, Dynamic load models, 221
Network analysis, Load flow 229
Digital simulation, Transmission expansion 245

Mathematical optimization
Distribution system design 259
Mathematical programming
Modelling of energy systems, Optimal power flow 273
Maximum efficiency
Transmission efficiency, Line efficiency 79
Method
Mid-term dynamics, Power system 137
Mid-term dynamics
Method, Power system 137
Mid-term voltage dynamics
Insecure voltage operating conditions 377
Model-based reasoning
Signal analysis, Diagnostics 101
Modelling
Power systems, Voltage collapse 239
Modelling of energy systems
Optimal power flow, Mathematical programming 273
Modular neural network
Fault diagnosis, Hierarchical neural network 65
Multi-objective procedure
Optimal load flow, Sensitivity analysis 71
Multiple objectives
Planning, Uncertainties 37

Network analysis
Load flow, Long-term system dynamics 229
Transient stability, Power system element modelling 315
Software design, Power station reliability 323

On–line control strategies
Control centre design, Security assessment 163
Emergency control, Software design 283
Eigenvalue analysis, Digital simulation 293
Emergency control, Software design 307
Dynamic stability, Transient stability 351
Optimal load flow
Sensitivity analysis, Multi-objective procedure 71
Optimal power flow
Scheduling, Load flow 131
Optimal power flow
Modelling of energy systems, Mathematical programming 273
Optimal solution
Economic dispatch, Unit commitment 193

Planning
Multiple objectives, Uncertainties 37
Power distribution
Genetic algorithm, Capacitor placement 155
Power generation dispatch
Real-time pricing, Power system economics 179
Power station reliability
Network analysis, Software design 323
Power system
Method, Mid-term dynamics 137
Power system economics
Real-time pricing, Power generation dispatch 179

Power system element modelling
